12. 9. 95

My dear Spencer

I have just received your letter of Sep 10th which together with your previous letter I will very carefully go through & answer as I am able. I am returning to me this evening and am now up to my neck in work which I must get done.

Pending a further examination I fancy that you are correct and that I was wrong in my suggestions. I did not know what names you paired the eye names or nasal grounds. When I tabulated the many ascendants I found that each line of descent included two subclans and

very stupidly overlooked the fact that each generation goes over to the other half of the class division. I am quite prepared to find that the arrangement which I thus made was wrong - no doubt your reluctant terms give the preference.

I think it my right to send this out at once in order to save you trouble - If I am in the way I regret very much giving you so much trouble.

Since I saw you I have found that our "friend" Matthews described the Bora ground & the proceedings therein to which the photos I showed you refer to. At any rate his description. (Arch. Aust. Mus. 1896) relates to the very same locality and the description he gives fits with the photos.

Yours faithfully

Anderson
