Stockholm  $\frac{16}{x}$  93.

5.

Dear Sir

I have just received with the greatest pleasure your kind letter of the  $\frac{12}{x}$  and I hasten to send you some copies of the communication in question. The mistake to which you allude respecting the point of attachment (centrum) of the pineal nerve or stalk to the epiphysis seems ~~to~~ me most natural by the adult animal, where they are indeed (by Iguana at least) most closely united by conjunctive tissue. In a paper, of which I am daily awaiting the copies, I have just pointed out the aforesaid mistake, I will have the honour to send you a copy of it

as soon as possible.

I would be most thankful to you  
if you could procure me the paper  
of Mr. Mac Kay on *Hinula* and  
*Grammatophora*, no library  
here possessing it.

Yours sincerely

Almquist
