

Cherouff Waters  
1 July '96

Dear Professor, I am very sorry  
to hear that you have been unwell,  
and hope that you are now  
quite recovered. The anthropological  
work in addition to the ordinary  
routing was altogether too much,  
and I am glad that the former  
is now successfully finished.

Despite the opinion of our voracious  
English and Colonial Press I can  
hardly believe that the U. S. is likely  
to form an alliance with England.  
America has always been friendly  
with Russia, and has over her  
independence, in a great measure,

France. In addition England is to all  
intents and purposes a German ally,  
and much less detests the pretensions of  
the mailed fist. As you say it will probably  
end in a big war - Germany opposes the  
U. S. in the Philippines, France intervenes  
between Spain and America - France,  
France, Prussia and U. S. attack  
Triple Alliance - England if war  
breaks on - if not. Fits looked in  
France - looked Newton!! England  
cooperating with the loss of India, and  
the African possessions also her fleet,  
which she lost thro' her Admirals joining  
the example of the late American Payson,  
and attempting to manoeuvre on ground  
water. Australia invaded by French  
whos are terrified at every out-cast looked,  
and the pretensions of Canada and other  
institutions, but who are friendly to  
with Poundabout Reid! C. A. Brady

depended by an army of five thousands  
unconquered.

The Jews had their points and  
the water towers are full, but there is  
little feed. Mureaupils with the  
exception of Lari points are scarce.  
The Lubrars are now out after Pools  
and bandicots in the Povalachery  
country where Helians that is a  
food and of water lying about.

By mail I am sending you ten  
just captured which should be in  
food condition for Section's class  
two or three better for French.

I saw a notice of a work by  
Dr. Folt in the Bulletin some time  
ago, but was much struck with his  
theory of training as applied to fatness.  
I always tho't that the operations on the  
females was a result of the operations on the  
males, being rendered necessary by the last

of Sembrator's Power in the male organ,  
but in the Lavrokeyah tribe I believe the  
female is not operated on, and the male  
is consequently not subincised which proves  
both right.

I will endeavour to get a Gouck  
Echidna, and keep a look out for  
happier ones, but I am afraid  
the Echidna will be difficult to get as  
they resemble the Moles in hiding and  
the young are fairly scarce.

Our boat is down 1200 feet, water  
stuck about 600 feet. Supply small,  
rising to within 160 feet of the surface -  
no increase in lines. Doubtful when  
finished as they are continually having  
accidents, and muddling things generally.

Field so far, a ghastly failure. Pottery  
put thro' about 250 tons in five months,  
Woolcock's Salary £35 per month. Coal per  
ton reckoning W's Salary about 14/- Rate

Charged to public about 12/-! Reverts  
from battery so far, about same as from  
Buntington Mill by 12 dwts per ton. Goes  
on average worth under £3.10 per ounce.

What Fortune and Star of North under  
management of Messrs Gillen & Deasy a great  
success. Two holes, one twenty, one fifty feet  
down, and about sixty tons of Stone picked  
off surface at a cost of £750. Result  
three Crushings 4 dwts, 10 dwts, and 2 dwts.  
Final result bankruptcy of Co!

I have stuck to W.A. and have  
been increasing holdings in Kalquell  
Mines. So far have been going steadily,  
but if war does not break out, there is  
I will more than recover losses eventually.

Lubra just came in, day's old  
women will be in tonight with  
moles and other beasts. Mail  
boxes at 2 P.M. so will not be able  
to forward for a fortnight.

Yours ever Sincerely  
P. M. Lyons
