

March 5. 82

(82)

Anatomical Department,
Museum,
Oxford.

Dear Howard,

Every body seems to
be in a bad way: Bourne
has been developed whooping
cough at last. He has of
course been living with one
child in Oxford that is during
the past fortnight so I like I'm
not in for it & don't feel at all
alarmed on the subject.

He goes down on Monday & worse
luck, will have to give up the

coaching of the 'varsity' right
which is somewhat serious seeing
that they have been relying upon
him.

I like you are all right & disinfected
by now = disinfection is a
"sterile" process usually amongst
"business"-men than school boys &
the time of infection is not
unnecessarily prolonged.

Have you heard from Mr. Robertson
yet?
I heard through Wells of Wadham
