

Cold weather has driven
them away ~~then~~ so I must
wait till next year if I
live so long. Alas my own
taken no interest in these
things so the furtherance
of the surgery will be
frustrated. The ~~greater~~
discovery has caused
some excitement

Again expressing my hope
that you are now con-
sistent - I remain

Your most sincere
W. Manuel Myddell

—AND TELEGRAPH—

My dear General Pitt Rivers
We are so very
sorry to hear from you
that you have had so
serious an attack of
illness. I trust that with
care you have been able
by this time to shake it
off and return to Rushmore
and among your interests
I never expected to have
any thing to do with
Entomology as it involves
traces of killing but
now when I get into
a controversy about Fresh

of which nearly every one
who wrote upon it considered
considerably. I never studied
or particularly but living
in a fresh fly district I
had not quite ignorant
of their habits. To my
surprise I have fallen in
with a new form, new
it appears to me to all
British *Submicrogaster* its name
is *Liposoma cervi* &
affects the deer kind especially
I wish when you kill a
deer you will have
it examined for this
parasite. My keep man

skilled & Roe deer for that
purpose & found it on each
deer as I seen find not
not a single British.
I certainly had ever seen on
alive & nothing like the vulgar
larva has been written on it
of course the German do but I
don't think any one has
established the fact that
some of these flies are large
a German writer records
one having been found with a
long leg. I got an answer
as I wanted by pushing
the horse through the
Wax-bush on which they
cling. Unpleasant the
