

(L158)

WHATCOMBE,
BLANDFORD.

Oct 16. 1874

Dear General Pitt Rivers

The title of Mr. Barron's
Geological "Thesis" is
Recherches sur le terrain
Cretace superieur de
L'Angleterre et de L'Irlande
1876. pp. 232. two good
pages covers a large
area & with much detail
I am anxious about the
Cenozoic & (andean) remains
from the U.S. I hope they
will prove to be there

of Stuy & Wolf. I am
 puzzled how they got
 in the well. The horn of
 the Providence had been
 shed naturally and was
 removed by force. However
 as the skull had the pedicle
 represented with horn it
 is possible the animal
 died at the time of shedding
 by the accident of tumbling
 in. The badge is often found
 in the season of
 hatching times, as well as
 the wild horn. My name
 often occurs to Bushman
 & North with Courner. I caught

a bad cold, but what I
 saw of Mr. Pitt-Rivers &
 your hospitality was worth
 the journey. I hope your
 wants have been removed
 then notice that you
 will not have any of them
 send them up you
 send. I remain
 Yours truly

J. M. Maxwell - Maydell
