

I have no bronze moulds,  
when the two halves of  
the mould are placed  
together there is a small  
cavity at the top of the  
mould, when the metal  
is poured in, the letters  
cast in this mould, are  
large and strong enough  
for all purposes, the moulds  
are granite 2 1/2 inches  
long, and 12 inches in  
circumference, any further  
particulars I will gladly give  
you if I can yours truly  
G Carey

Sir,  
In answer to your  
letter of the 19<sup>th</sup> inst, I have  
two letter moulds, I send a  
drawing of one of them,  
the other is very similar,  
I am sorry I cannot show  
it as it should be, but  
I hope it will give you  
an idea of the moulds,
