16 January 92.

Dear Genl: Pitt-Rivers.

Since the meeting at  
the antiquaries I have  
submitted the dog's  
Radii you saw there  
to Prof: Newell who  
says that the curved  
bones are certainly not  
fractured and are  
quite healthy. He thinks  
they have come from  
dogs of the furred  
or dachshund variety  
but has no new skeleton  
at the Coll: of Lgs: with  
which to compare them

Would you like to have  
them to compare with  
your ulnae? Now that  
the exhibition is closed,  
I can send them to you.  
The skulls of the cat have  
attracted much attention.  
The specimens on two files  
I saw out to be those of  
the Cat, and the question  
is whether the skulls &  
bones are those of the  
Wild or domestic Cat.  
Have you found any  
cats' bones?

I am Dear Sir

Yours very truly  
Herbert S. Lucas
